

SAMPLE MATERIAL: 24 HOUR URINE COLLECTION

Samples Collection

- Obtain a 24-hour urine collection container (these canisters normally contain 2.5 L of urine, if you feel it's necessary obtain a second canister);
- Throw away the first morning urine
- From that moment for the next 24 hours collect urine directly into the canister (from the second urination to the first urination the following morning)
- During the urine collection keep the canister in a cool place throughout the day.
- When collection is complete, note the volume of the entire collection, patient's surname, first name and date of birth on the canister
- **Note:** it is very important that all 24-hour urine is collected

Samples Delivery

- Check the opening hours of your chosen laboratory analysis center
- Register at the counters at the Administrative Reception desk
- Deliver the canister to the health personnel in the collection room: be sure volume of the entire collection, patient's surname, first name and date of birth are noted on the bin.
